

# Personal expense Tracker

## INTRODUCTION:

Personal Expense Tracker System is a system which will keep a track of Income-Expense of a individual person on a day to day basis. This system takes income from an individual and divides in daily expense allowed. If you exceed tht days expense it will cut if from your income and give new daily expense aloowed and if tht days expense is less it will add it in savings. daily expense tracking system will generate report at the end of month to show Income-expense curve. It will let you add the savings ammount which you had saved for some particular Festivals or day like birthday or anniversary.

the "EXPENSE TRACKER" is developed using Angular 8 for front end and SQLite back end.To use the expense tracker the user has to sign up it includes name ,phone number, address, email, username, password and confirm password of the user. The user can get enlisted just a single time, per user acn just one record.

## APPLICATION:

This system will be used by an individual person(user) to control their Income-expense from day- to- day to yearly basis and to keepa watch on their expense.

## TECHNICAL ARCHITECTURE:
